Elkay® Commercial Products – Improving the Healthcare Environment

As ecological concerns continue to make headlines, many hospital administrators, healthcare professionals and patients are becoming increasingly aware of the environmental impact of their actions and choices. From building materials and fuel-efficient transportation choices, to facility recycling programs and even the amount of water used and conserved on site, healthcare facilities are considering products or solutions to support their drive to become more efficient with our scarce natural resources.

MODEL: LZ08
MODEL: VRCGRN

Filtered Water Coolers Equal Less Bottled Water Waste

In many healthcare facilities, employees and patients have embraced water coolers and drinking fountains as their primary source for a cool, clean and healthy drink of water throughout the day as mounting cost and waste concerns continue to saturate the bottled water industry. Delivering a refreshing and environmentally responsible alternative to bottled water, Elkay introduced the industry's first hands-free Elkay WaterSentry® Cooler with Visual Filter Monitor in 2007. Ideal for a healthcare setting, this innovative, all-in-one model is "hands-free" thanks to the built-in electric eye sensor that dispenses water without the patient, hospital employee or visitor touching the water cooler, ensuring hygienic operation. Outfitted with a unique LED display on the user interface, this model features lights that visually communicate the presence of a built-in WaterSentry® filtration system and notify maintenance personnel that the filter is functioning and when it needs to be replaced.

Today, motivated by the escalated stress on the environment and backed by a history of innovation, Elkay continues to lead the industry in unparalleled product innovation with the introduction of the VRCGRN water

cooler. As the first GreenSpec® listed addition to its family of innovative drinking water solutions, Elkay's VRCGRN water cooler provides a thirst-quenching stream of drinking water that consumes 40 percent less water and 50 percent less energy when compared to the average market performance. With the addition of the optional 1,500-gallon WaterSentry® filtration system and glass filler, the VRCGRN can eliminate the need for up to 12,000 16-ounce plastic bottles per filter.

MODEL: EWS2520FC

Choosing the Right Sinks

Elkay offers a wide range of durable ADA-compliant stainless steel sinks for a variety of applications, from the patient room to the operating room to the cafeteria.

When selecting a sink, the material type, gauge, shape, depth, sound suppression and surface finish should all work together to function in its application while withstanding its environment. Elkay uses only the highest quality 300 series stainless steel in various gauges to help ensure long-lasting performance and durability. Elkay sinks offer superior cleanability and are easy to sanitize, making them the ideal choice for healthcare applications.

MODEL: LK720AC

Fitting Faucets for Healthcare Facilities

It is not just the sink that needs to survive the environment, but faucets as well. Several features to look for when selecting a faucet are solid-brass construction, chrome finish and a quarter-turn ceramic disc cartridge which provides long-lasting superior performance. Built for rigorous use, Elkay faucets include all of these features and are precision manufactured for trouble-free service. Elkay's extensive faucet offering is enhanced with interchangeable spouts, handles and aerators, making it easy to configure a faucet to meet the needs of any medical facility. When selecting plumbing products for healthcare facilities, there are many things to consider. Elkay Commercial Products, your one quality source for sinks, faucets, water coolers and drinking fountains, is the ideal solution for even the most high-traffic commercial applications.
